(a) $r = 2$: monotone branch
(b) $r = 3.17$: fold, interior jump
(c) $r = 5$: jump from quarantine-only
(d) $r = 15 > r_\infty$: split branch
interior local min
interior local max
cost-optimal $u^*(S)$
$u = cS/(c_0 S_c) = (1 - q_0)/(1 - q)$
